

RELAXING DEEP WARMTH

Powered by natural minerals.

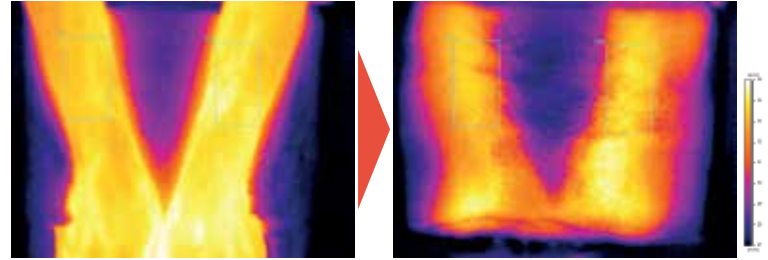

Embedded natural minerals in the fiber convert body heat into infrared energy and reflect it back to the body as opposed to standard, hollow fiber comforters that provide insulation by trapping warm air to reduce the loss of body heat. As well as this classic insulation effect, Climarelle® Thermo generates an additional relaxing, deep warming effect thanks to infrared waves.

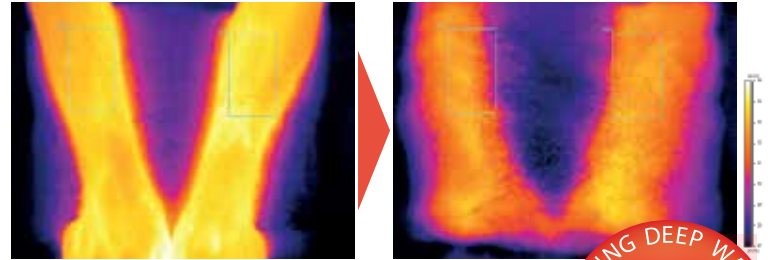

Climarelle® Thermo features natural minerals in the fiber that convert body heat into infrared energy and reflect it back to the body.

This sleep innovation is ideal for comforters, providing the optimal warmth without bulk and weight. Also beneficial for pillows, the deep warmth can be soothing when cradling the head and neck.

(control
sample)

Description: One person laid both arms on the non-woven sample. After two minutes, arms were removed and the temperature of the sample was documented by an infrared camera.

*After two minutes, the temperature of Climarelle® Thermo was 33° F higher, corresponding to a higher skin temperature.**
