

**SUPRELLE®**  
ECO ACTIVE

## RECHARGE AND REFRESH

*Active bedding for restful sleep.*

Balance your active days with restful nights. Like your favorite activewear, Suprelle® Eco Active fluff wicks moisture, helping to keep your sleep environment dry and fresh throughout the night.

*Suprelle® Eco Active provides outstanding moisture management combined with extra soft fibers for maximum comfort.*

Breathable.

Extreme softness.

Moisture wicking.

Machine washable.

**TECHNOLOGY  
THAT CARES**

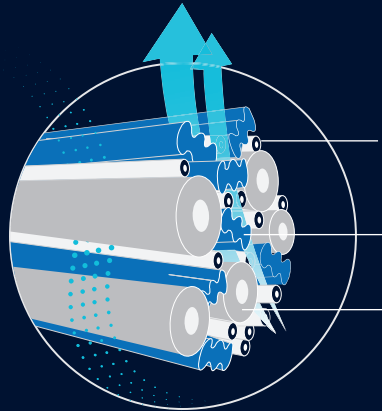

Suprelle® Eco Active is manufactured with our innovative Eco2 Technology, reducing CO<sub>2</sub> emissions, land and water use in the manufacturing process of the fibers.

# BREATHABLE SUPPORT

## Moisture wicking fluff

Suprelle® Eco Active features a mix of innovative fibers, among them a special cross-section that allows for transportation of perspiration away from the body to the surface where it can swiftly evaporate.

*Suprelle® Eco Active is a blend of fibers that create a perfect synergy in sleep comfort.*

### Superfine Hollow Fiber

Hollow fibers act as a thermal buffer cushioning the body from temperature changes. The superfine fiber is also luxuriously silky and soft.

### Tetrachannel

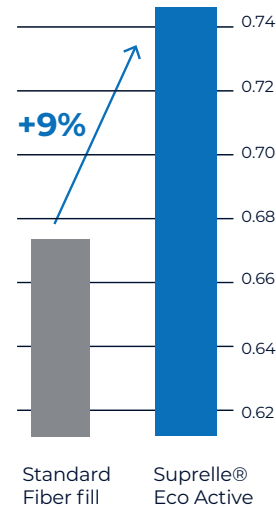

The cross section transports perspiration away from the body to the surface where it can swiftly evaporate.

### High Density Fiber

High void, full density fibers are resilient and comfortable. This cozy fluff provides more bulk and air circulation.

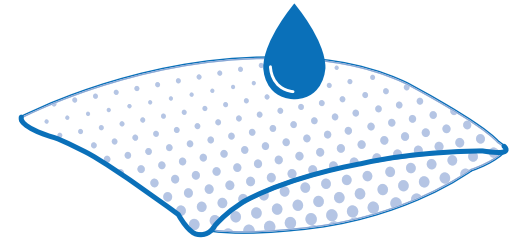

Warmth is perceived differently during the various phases of sleep. The functional fiber mix helps balance differences in temperature, and its enlarged surface aids in transporting any moisture away from the body. This interaction helps maintain the body in a comfort zone, for restful sleep all night long.

Our next generation fluff is pure and premium fiberfill made with polymer derived from recycled bottles and produced with less land, less water and less CO<sub>2</sub>.

\* Test conducted (Summer 2014) by TÜV Rheinland as per EN 31092/ISO 11092:1993

*Suprelle® Eco Active balances differences in temperature and its enlarged surface transports moisture away from the body.*

*Independent testing shows that Suprelle® Eco Active has better moisture transport than traditional fiber fill.*
